Job Market Paper

Land Rent Discontinuities and Taxation in the Cross-Border Commuting Region
Joint with Pierre M. Picard — **R&R at the Journal of Urban Economics**

Cross-border housing markets have become more prevalent in Europe since the establishment of the European Union. With data from the functional urban area of Luxembourg, we document significant floorspace price discontinuities at the borders of Luxembourg with Belgium, France, and Germany. Using a quantitative spatial urban model and spatial regression discontinuity techniques, we show that differences in tax rates account for up to 16% of the floorspace price discontinuity. The remaining price discontinuity is explained by differences in land use, productivity, and amenities.
